SUMMARY

Offensive Security Consultant with 53 engagements across 12 industry sectors. Focused on web, API, mobile, Active Directory, cloud, and IoT attack surfaces. Co-author of 2 peer-reviewed security publications (Best Research Paper, PROFES 2024).

SKILLS

Security Tools: Burp Suite, Metasploit, Sliver, BloodHound, Impacket, Mimikatz, Frida, MobSF, Nmap, Nessus, Hashcat, Wireshark
Platforms: AWS, Azure / Entra ID, Active Directory, OAuth/OIDC, SAML, Docker, Kubernetes, Linux, Windows, iOS, Android
Programming: Python, Bash, PowerShell, Go, Rust, C, C++, TypeScript, JavaScript, Lua, Nix, SQL, Haskell, Java, C#
Methodologies: OWASP (WSTG, ASVS, MASVS, MASTG, Top 10), MITRE ATT&CK, PTES, NIST SP 800-115, CVSS, CWE, PCI DSS, GDPR

EXPERIENCE

QESTIT Cybersecurity AB | Malmö, Sweden

Jan 2021 – Present

Offensive Security Consultant

Jul 2023 – Present

- Found critical vulnerabilities across 40+ engagements: RCE paths, EDR bypass via BYOVD, Metasploit-WinRM chains, LSA credential dumps, and Kerberoastable accounts in enterprise AD, cloud, and web environments.
- Handled IR on an Akira ransomware intrusion. Rebuilt the attack timeline, traced lateral movement and C2 traffic across AD/SMB/Windows, and confirmed containment.
- Wrote custom Frida hooks, exploit scripts, and C2 payloads that bypassed EDR, certificate pinning, Play Integrity attestation, and anti-tampering controls on red team engagements.
- Built the firm's automated report generation framework in Typst, replacing manual assembly and standardizing deliverables across the team.
- Tested mobile apps (iOS/Android) on medical devices and hospitality platforms with MobSF, Frida/Objection, and Magisk-rooted rigs. Found clinical data in memory, extractable keys, and missing cert pinning.
- Ran internal AD assessments for insurance, energy, and manufacturing clients using LLMNR/NBT-NS poisoning, NTLM relay, GPO abuse, and MDM bypass to demonstrate lateral-movement paths.

Junior Penetration Tester

Jan 2023 – Jul 2023

- Ran web app, API, and network pentests following PTES and OWASP. Wrote up findings for both engineers and execs so remediation actually happened.
- Built exploit scripts and automation tooling that sped up engagements and became the foundation for the firm's reporting framework.

Penetration Testing Intern

Jan 2021 – Dec 2022

- Learned pentesting methodology from senior consultants while finishing BSc, contributing to live client assessments.
- Wrote BSc thesis on secure web development with University of Gothenburg; published at PROFES 2024 (Best Paper).

CERTIFICATIONS

Multi-Cloud Red Teaming Analyst (MCRTA) | CyberWarfare Labs | Mar 2025

Certified Penetration Testing Specialist (CPTS) | Hack The Box | Jan 2025

CyberOps Associate | Cisco | Aug 2021

PUBLICATIONS & AWARDS

K. Svensson, D. Axelrod *et al.*, "Guidelines for Supporting Software Engineers in Developing Secure Web Applications," *PROFES 2024*, Springer, 2025. **Best Research Paper Award**. doi:10.1007/978-3-031-78386-9_9
